

CliniJet

Dental Aspiration Unit Sanitizer & Cleaner

DS (Daily Sanitizer/Cleaner)

WS (Weekly Sanitizer/Descaler)

CliniJet-DS and CliniJet-WS are Clinical Detergent/Sanitizers Specially Formulated to work as a team to Sanitize and Clean Dental Aspiration Lines & Separation Systems

CliniJet-DS (Daily)

CliniJet-DS should be used each day as part of the routine maintenance & sanitation of aspiration lines & to assist the removal of bioburden.

Passes the TGA Disinfectant Test Option B.

Highly effective sanitizer incorporating an advanced de-foaming formulation for rapid sanitation of the aspiration lines.

Incorporates unique de-foaming surfactants to ensure detergency of contaminating soils and penetration of biofilm.

Mild alkaline auxiliary agents enhance the activity of the sanitizing agents and aid in the solubilization of proteins and soils.

CJ-DS-5
(5L Container)
CJ-DS-15
(15L Container)

CliniJet-WS (Weekly)

CliniJet-WS should be used once or twice per week as part of the routine maintenance & sanitation of aspiration lines & to assist the removal of bioburden.

Highly effective sanitizer and descaler helps remove soils that are resistant to other detergents.

Incorporates unique de-foaming surfactants that ensure penetration of biofilm and contaminating soils.

Mildly acidic descaling agents based on natural Lactic acid and Citric acid are incorporated for their excellent compatibility with metal, plastic and rubber components.

CJ-WS-1
(1L Container)

Preventative Maintenance of Dental Aspiration Systems

Routine cleaning is an essential part of maintaining your aspiration line in top condition and ensuring effective trouble free operation.

Sanitation of the waste system is essential to maintaining an efficient aspiration system and protect patients and staff from potentially hazardous microorganisms

A daily mild alkaline sanitiser/cleaner (**CliniJet-DS**) will clean protein and biofilms from the lines while eliminating bacteria before they can form biofilms which can constrict the lumen in the lines, adding strain to the pumps.

A weekly descale (**CliniJet-WS**) will remove material that is resistant to most cleaners.

A nil foaming sanitiser/cleaner is important to maintain the efficiency of the pumps and traps. Sanitising & Cleaning every day prevents the build up of bacterial growth (biofilm) which can trap other debris.

NOTE: Strong domestic hypochlorite solutions should never be used to clean aspiration lines because the chlorine can damage rubber and metal components. Also these types of cleaners are usually caustic and therefore can damage some materials, they are also high foaming.

Phenolic compounds in some industrial disinfectants will damage plastics and rubber.
